Brianna Howarth was one of the first to graduate with a Queensland Certificate of Education (QCE) via distance education at Australian Christian College - Moreton last year. Since graduating, life for Brianna has definitely not slowed down. She is currently studying a Bachelor of Biomedical Science at the University of Sunshine Coast (USC) with the intention of transferring to a Bachelor of Veterinary Science as soon as her GPA is high enough.

Brianna has always had a love for science, in particular Chemistry. “My love of science subjects was nurtured throughout high school by my teachers. I feel the career path I am heading down will be both rewarding and challenging.”

“I chose to move back to DE in term 4 of year 11 and finish my high school journey via ACC. I wanted to focus more on the academic side of my schoolwork and less on the social aspects that I found came with mainstream schooling. This move allowed me to really understand and fall in love once again with learning and science.”

Brianna’s encouragement to school leavers is “university is really not as scary or as hard as you may think. Distance education teaches you how to time manage, upload assessments online, message teachers and how to learn best. You are well prepared after DE.”

Subjects Studied:
English, Maths A, Maths B, Biology, Chemistry

Career goal:
To become a Vet and open up a practice. Brianna would love to use her God-given skills and knowledge to train farmers in developing countries with the hope to improve their livelihoods and provide a sustainable future for communities.

‘Distance Education really gives you an advantage when stepping into the university life’.
